

Easily build and scale **cellular IoT products** with a single global SIM.

Provision, manage and monitor usage via an easy-to-use self-service platform and API.

One SIM, global coverage

Take your products global with a hardware-agnostic SIM that connects to the best available network using 2G/3G/LTE/CatM1 on 500+ carriers.

Ultimate network control

Avoid the hassle of managing multiple carriers with automatic carrier switching. Or, configure SIMs to preference specific networks.

Pay-as-you-go pricing

Only pay for the data you use. With Telnyx, you're free to pause your devices anytime you need via our self-service portal or API.

Build the next generation of revolutionary IoT applications.

Industrial

Gather and share M2M data for quality control, remote equipment monitoring, and asset tracking.

Healthcare

Power mission-critical healthcare applications like remote patient monitoring and wearables.

Fleet management

Connect your entire fleet via a single platform, with global coverage and easy monitoring.

Energy and utilities

Enable smart grids, smart metering, and remote diagnostics for easy monitoring and billing.

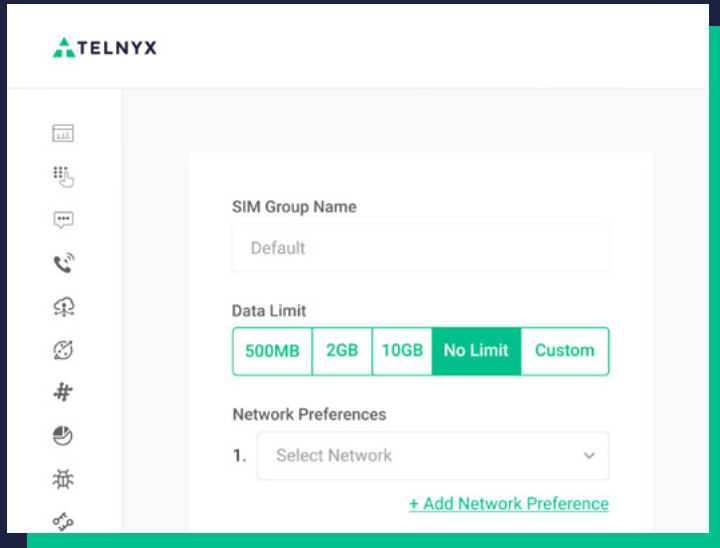

Retail

Always-on availability for your POS or payment system, even when your primary connection fails.

Logistics

Track your assets in real-time with seamless global coverage and end-to-end visibility.

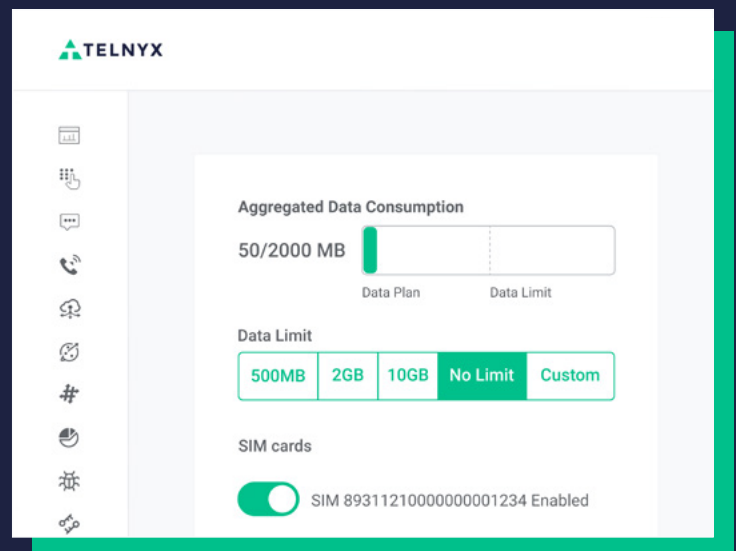

Network redundancy and control.

- ✓ **Network control**
Remotely configure your SIMs to preference specific networks.
- ✓ **Private LTE network**
Connect SIMs to your corporate network via our private IP backbone for enterprise-grade security.
- ✓ **LTE-M access**
Gain access to 25+ LTE-M networks globally to power your IoT products.

Easy configuration and monitoring.

- ✓ **Granular usage data**
Access detailed usage data for granular insight into SIM usage.
- ✓ **API control**
Experience full programmatic configurability via our RESTful API.
- ✓ **Bulk SIM management**
Group SIM cards as needed to monitor and manage them in bulk.
